

LIMITED WARRANTY — INLAND, NON-HVHZ

SourcePoint Element Aluminum Doors (Inland)

PRODUCT LINE	SourcePoint Element Aluminum Doors — hinged and folding configurations
SCOPE	INLAND, NON-HVHZ. This warranty does not apply to the Element Coastal Defender Folding Door or to any other product supplied for installation in a High Velocity Hurricane Zone. Those products are covered by a separate warranty.
VERSION	1.2
EFFECTIVE	Products invoiced by SourcePoint on or after January 1, 2026

“Inland” — definition

“Inland” means an installation that is **two (2) miles or more** from an ocean, gulf, bay, sound, inlet, tidal river, or other body of salt or brackish water.

Element Aluminum Doors are engineered and sold for inland application. **This warranty still applies to an Element door installed inside that two-mile line — but on the reduced terms set out in the coastal section.** It does not become void; it becomes shorter.

Read together with the SourcePoint Master Warranty Terms and the SourcePoint Element Aluminum Doors (Inland) Care & Maintenance Guide, both provided with this document. All three together form your warranty.

COVERAGE

Coverage at a Glance

All coverage periods below run from the coverage start date — see the SourcePoint Master Warranty Terms, Section 1a.

WHAT	HOW LONG
Structural and mechanical defects — door and frame	5 years
Stock powder coat finish (black, white)	10 years
Custom color powder coat finish	3 years
Any finish — coastal or saltwater environment	1 year
Glass	1 year
Folding systems — rollers, carriers, tracks, multi-point locking hardware	5 years
Folding systems — weatherstripping, seals, sweeps	1 year
Screens — parts, excluding mesh	1 year

Multi-resident buildings: **2 years** — see the SourcePoint Master Warranty Terms, Section 7.

What Is Covered

Structural and mechanical defects (5 years). If a defect in material or craftsmanship causes the door or frame to fail to perform as intended and designed, SourcePoint will, at its sole discretion, provide replacement parts, make necessary repairs, or refund an amount equal to the cost of those parts or repairs.

Powder coat finish. The finish is professionally applied and is warranted against failure as defined below. Stock finishes — black and white — are warranted for **10 years**. Custom colors are warranted for **3 years**. Both terms are subject to the maintenance requirements in this warranty and in the Care & Maintenance Guide.

Excludes scratches, and excludes damage to the finish caused during installation, transportation, or misuse.

Glass (1 year). Excludes minor imperfections, scratches, and broken glass.

All claims are subject to inspection and authorization at SourcePoint's sole discretion.

What Counts as Finish Failure

A finish is considered to have failed only where it shows:

1. Substantial cracking, chipping, or peeling caused by deterioration of the finish itself, excluding mechanical damage; **or**
2. Chalking in excess of a numerical rating of **8** as measured per **ASTM D 659**; **or**
3. Fading or color change in excess of **5** units as measured per **ASTM D 2244**.

Uneven fading is not a covered condition. Elevations receive unequal sun and weather exposure, and the resulting variation is environmental, not a defect.

Maintenance Is a Condition of Coverage

 **Finish coverage is conditional on documented maintenance.**

The finish warranty applies only where the door has been cleaned and maintained in accordance with **AAMA 609 & 610**, the industry standard for cleaning and maintaining architecturally finished aluminum, and with the SourcePoint Element Care & Maintenance Guide.

SourcePoint may require documented proof of regular cleaning and maintenance as a condition of any finish claim. Keep a simple dated record of each cleaning. Failure to maintain adequate cleaning records is grounds for denial of a finish claim.

Any breach in the finish — scratches, chips, or abraded areas — **must be repaired promptly**. The metal substrate must never be left exposed to the elements.

Folding Systems — Additional Coverage and Conditions

This section applies only to Element folding configurations. All other terms of this warranty apply to folding systems as well.

Element folding systems are supplied in outswing configuration only.

Additional Coverage

Rollers, carriers, tracks, and multi-point locking hardware (5 years). Covered against material and workmanship defects that substantially impair operation and function, subject to the maintenance and adjustment conditions below.

Weatherstripping, seals, and sweeps (1 year). These are wear components. Replacement after the first year is normal owner maintenance.

Screens (1 year). Covers screen frame and hardware components against material and workmanship defects that substantially impair the function of the screen. **Screen mesh is not covered.**

SCREENS ARE NOT A SAFETY BARRIER

Screens are not designed or intended to keep children or pets safely contained, and must never be used or relied upon for that purpose.

Additional Conditions of Coverage

Folding systems have moving parts operating in a track. Coverage on those parts is conditional on all of the following:

- **Keep the track clean.** Grit, sand, and debris in the track are the primary cause of roller and carrier failure. Vacuum or wipe the track clean at the intervals in the Care & Maintenance Guide.
- **Keep the system adjusted.** Folding hardware requires periodic adjustment. Damage caused by improper adjustment, or by failure to adjust the system in accordance with SourcePoint's published maintenance instructions, is not covered. Current adjustment requirements and intervals are set out in the SourcePoint Element Aluminum Doors (Inland) Care & Maintenance Guide.
- **Operate the system at least monthly.** Folding systems that sit unused bind and seize. Damage arising from failure to operate the product for more than one month is not covered.
- **Engage all locking points when closed.** Panels left unlocked are unsupported.
- **Do not leave panels stacked open and exposed to weather.** Warpage or damage caused by leaving panels in the open position exposed to the elements is not covered.
- **Keep weep holes clear and draining.** Where the sill is provided with weep holes, they must be kept clear of debris and allowed to drain freely. Blocked weeps trap water in the sill.
- **Header deflection must not exceed 1/4 inch.** Folding systems span wide openings and are unforgiving of structural movement. Damage caused by deflection of the header beyond 1/4 inch, by improper header sizing, or by movement or sagging of surrounding framing is not covered.

Not Covered on Folding Systems

- Alignment of meeting panels
- Panel movement or shrinkage of 1/4 inch or less
- Slight expansion or contraction resulting from varying environmental conditions
- Screen mesh, and screen damage from wind, sun, rain, abrasion, heat, cold, rough handling, pets, or accumulated dirt, dust, hair, salt, sand, or debris
- Screens installed on the exterior side of the system
- **Water, wind, or airborne particle penetration on any inswing folding configuration.** Element folding systems are supplied outswing only. This exclusion reaches any folding system installed, configured, or modified to operate inswing. **It does not apply to hinged Element doors, which are warranted in either swing.**
- Products installed in locations where it would be inaccessible or unsafe to perform work on the product on site

Field Testing

This warranty does not cover field testing of the product, or performance of the product in conformance with published SourcePoint test results — including air infiltration, water infiltration, structural loading, thermal, and acoustic performance.

Published test results reflect laboratory performance of a single sample of a specific size, sill, and configuration, and may not apply to a product being field tested. Performance during field testing varies with handling, installation, use, maintenance, and elapsed time since installation.

Where field testing is performed, it must comply with **AAMA 502**, including water penetration testing at two-thirds of the pressure of the applicable published test result.

COASTAL

Coastal and Saltwater Environments

What Counts as a Coastal or Saltwater Environment

A **Coastal or Saltwater Environment** means any location within **two (2) miles** of an ocean, gulf, bay, sound, inlet, tidal river, or other body of salt or brackish water, measured in a straight line from the installation address to the nearest such water.

Why Coverage Is Different Here

Salt air is corrosive and abrasive. Airborne salt deposits on every exposed surface, holds moisture against the coating, and works into tracks and recessed areas along with sand.

Even with constant and correct maintenance, product installed in a Coastal or Saltwater Environment will deteriorate faster than the same product installed inland. That accelerated deterioration is a property of the environment, not a defect in the product.

Coverage in a Coastal or Saltwater Environment

WHAT	STANDARD	COASTAL
Structural and mechanical defects	5 years	5 years — unchanged
Stock powder coat finish (black, white)	10 years	1 year
Custom color powder coat finish	3 years	1 year
Glass	1 year	1 year — unchanged
Corrosion, oxidation, pitting, or tarnish of aluminum or components	—	Not covered

Required Maintenance — Conditions of Coastal Coverage

All coverage in a Coastal or Saltwater Environment, including the 5–year structural coverage, is conditional on **all** of the following:

- **Monthly cleaning.** Every surface must be washed with mild detergent and water at least once per month, then rinsed and dried. Salt and other corrosive or abrasive substances must not be allowed to build up on any surface.
- **Debris removal.** Sand, dirt, and debris must not be allowed to accumulate in any track, pocket, threshold, or recessed area. Sand is particularly damaging to weatherstripping, sweeps, and moving components.
- **Immediate finish repair.** Any scratch, chip, or abraded area that breaches the finish must be repaired immediately. **The metal substrate must never be left exposed to the elements.**
- **Documented maintenance.** Dated records of the above are required to support any claim. See the Care & Maintenance Guide.

Full requirements are in the SourcePoint Element Aluminum Doors (Inland) Care & Maintenance Guide.

Building on the Coast? Consider Coastal Defender

The standard Element door is engineered for inland and sheltered installations. If your project sits in a Coastal or Saltwater Environment — or in a High Velocity Hurricane Zone — the **Element Coastal Defender Folding Door** is built for those conditions and carries its own warranty written for them.

Talk to us before you order. We would rather help you specify the right product than reduce your coverage after the fact.

MATERIAL

About the Material

SourcePoint Element doors — hinged and folding alike — are constructed from extruded aluminum with a **thermal break** for improved energy efficiency. They are manufactured to industry standards; minor variation in material and finish is normal and is not a defect.

Aluminum resists rust, but it is not immune to moisture. Prolonged exposure to water or chemicals may cause surface changes. **Keeping the door clean and dry is essential.**

All SourcePoint Element doors are manufactured overseas.

EXCLUSIONS

Not Considered Defects

- Minor metal, glass, or paint imperfections allowable under industry standards

- Condensation, frost, mold, mildew, corrosion, or fungus on product surfaces
- Temporary thermal expansion or bowing from direct sunlight or from a significant differential between indoor and outdoor temperatures
- Natural aging and color variation from exposure to the elements and frequent use
- Uneven fading between elevations
- Normal wear and tear, and changes in the color of hardware finishes

Damage caused by chemical exposure is not covered. This includes damage from chlorine, pool and spa chemicals, chemically treated water, sulfur, acids, solvents, and harsh cleaning agents.

VOID CONDITIONS

Conditions That Void This Warranty

This warranty is **void** if:

- The door is not installed or maintained in accordance with SourcePoint's requirements, AAMA 609 & 610, industry standards, and applicable building codes
- The door is not protected from the elements by adequate overhang (see **Overhang Requirement** below)
- Installation is nonstandard, including installation out of vertical plane, sloping glazing, or out-of-square/out-of-plumb
- The door is subjected to stresses from structural settlement, vibration, soil movement, or other building movement, or to localized heat application causing excessive temperature differentials across the surface or glass
- Aftermarket tints, coatings, films, or other modifications are applied
- The door is exposed to extreme weather or atmospheric conditions or Acts of God
- The door is modified or altered by the purchaser or any third party
- The door is improperly used or maintained, or maintenance records are not kept
- A storm door of any type is installed in front of the door (see the SourcePoint Master Warranty Terms, Section 6a)
- On folding systems: the track is not maintained or the hardware is not adjusted

ACCESSORIES

Excluded Accessories

This warranty does not cover optional accessories, parts, add-ons, equipment, supports, pans, caps, screens, safety or panic hardware, or other aftermarket items — whether or not affixed to a SourcePoint product, and whether or not manufactured by SourcePoint.

WEATHER

Extreme Weather and Condensation

Aluminum doors with a thermal break are designed to perform across a wide range of conditions including heat, cold, wind, and moisture. Performance in extreme weather depends on installation, exposure, and maintenance.

Moisture build-up is not evidence of substandard manufacturing or a product defect, but left unattended it can damage the door, trim, and flooring. **SourcePoint does not warrant against condensation and is not responsible for damage from “sweating.”**

WARRANTY CONDITION

Overhang Requirement

WARRANTY CONDITION

A door that is not shielded from the elements by adequate overhang is **not covered by this warranty**.

Overhang is the single most important factor in the service life of an exterior door. Every material fails in its own way without it: iron rusts, wood moves and rots, finishes crack and lose adhesion, and water finds its way past weatherstripping.

The formula

$X = \frac{1}{2}Y$

- Y = the vertical distance from the bottom of the door to the base of the overhang
- X = the required horizontal projection of the overhang from the wall

DISTANCE FROM BOTTOM OF DOOR TO BASE OF OVERHANG (Y)	REQUIRED PROJECTION (X)
8 ft (96 in)	4 ft (48 in)
10 ft (120 in)	5 ft (60 in)
12 ft (144 in)	6 ft (72 in)

Adjusting for exposure

The formula is a minimum for typical conditions. More projection is required where the door faces prevailing wind and driving rain, south or west exposure with long daily sun load, or coastal salt air.

Recessed and sheltered entries

Recessed entries, deep covered porches, and vestibules may satisfy this requirement without a projecting roof, provided the door is genuinely shielded from direct rain and sun.

If you cannot meet the requirement

Talk to your SourcePoint dealer before you order. Some products and finishes tolerate exposure better than others, and your dealer can help you select the right one for the site. A door installed without adequate overhang is not covered, and that cannot be corrected afterward.

TERMS

Ownership

End User only. Non-transferable. U.S. residential installations only. Multi-resident buildings carry a **2-year** term. See the SourcePoint Master Warranty Terms, Section 7.

Clearance and Surplus

Element doors sold as “surplus” or “clearance” are sold **as-is with no warranty**. Each has been inspected and determined to be fully functional and free of mechanical defects before leaving the warehouse. **All sales final.**

Special Order

Element doors special-ordered to your specifications are **not eligible for return or exchange under any circumstance** and are supplied on estimated lead times only.

Claims, Returns, and Remedy

See the SourcePoint Master Warranty Terms — Sections 4 (Our Remedy), 5 (Inspection, Reporting, and Claims), and 9 (Returns).
